

Slip Sheets

DESCRIPTION

Slip Sheets are a perfect substitute for the traditional wooden pallets. They are manufactured with multiple sheets of kraftliner with high resistance to moisture and breakage. They are used in different sectors contributing important savings in storage space in comparison with the wood pallets and total cost savings of packaging. Apart from the standard sizes, slip sheets can be made with a maximum width of 1400 mm + leg of 50 mm or with a minimum width of 240 mm + leg of 50 mm. The use of slip sheets is respectful of the environment, is hygienic and 100% recyclable.
